

## The Altered Shulgin Scale and Conceptual Hallucinogens

I do apologise that you only have this A5 micro lecture handout and not the full 44 page A4 lecture notes – unfortunately logistical issues prohibited the full supply of the complete lecture notes to everyone who attends EGA 2009. The purpose of this micro-handout is to remind you to download the full lecture notes, in printer friendly Adobe Acrobat PDF format, and also the full documentation of the example conceptual hallucinogens –

EC2C-ASS-AUM-2008 and EC2C-ASS-AUM-2009

All resources can be downloaded from these URLs on the Internet:

<http://qiq-ec2c.net>

- EGA-2009-Lecture\_Notes-DateCode-20111123.zip
- AUM-2008-Dana\_Cloud-DateCode-20111029.zip
- AUM-2009-Dana\_Cloud-DateCode-20100809.zip

It is recommended that all three document sets be downloaded to be able to establish the fullest context and clearest perspective on what is being communicated in this lecture, thankyou.

What follows are some illustrative excerpts from the lecture:

...Thus the concept of “Conceptual Hallucinogen” (CH) is a conceptual hallucinogen, in and of itself – indeed “Conceptual Hallucinogen” is a hallucination about the nature of concepts. However the conceptual hallucinogen “Conceptual Hallucinogen” is profoundly subtle and aethereally fine and it’s difficult to get any perceptive, cognitive or insight traction on it’s essential nature...

A far more tractable analogue of CH is known as EC2C. The reader having just been dosed with EC2C will be immediately aware that it’s easy to see that the conceptual hallucinogen CH-EC2C (or EC2C which is the normative notation) is easier to see in it’s effects on the experiencer’s consciousness than CH by itself, an “Mnemonic Anamnesis Finger-String” (MAFS) phrase to remember it’s conceptual hallucinogenic nature is:

**EC2C = Error Correcting Clarifying Concept**
